PORTABLE AND DURABLE

The CAMSS16EX shelter is compact and quick to assemble, but it is also a rugged and durable shelter of the caliber you would expect from any system we offer. The shelter can be assembled for fast deployment in as little as 20 minutes by a crew of three personnel (no ladder necessary) and is designed with safety in mind for your setup. Featuring high strength aluminum and Mil-Spec fabric, the CAMSS16EX has been engineered to support a 15 pound snow load and winds up to 100 mph. The shelter can withstand even the most inhospitable of conditions. The Extreme Weather Kit bundled with this shelter also includes a ruggedized liner system for effective climate control in harsh or humid environments.

VERSATILITY

Measuring 16' wide by 16' long with a sidewall height of 7', the CAMSS16EX has been widely accepted as a perfect fit for the housing of reverse osmosis water purification systems as used in BEAR Base assets. As well, this system has been found to accommodate a diverse assortment of other applications, including emergency shelters, offices, small shops, warm-up huts, and any situation where a sturdy and light-weight shelter is required.

EASE OF DEPLOYMENT

Requiring only 25 cubic feet when packed, the 256 square foot system is extremely portable and simple to ship. Twelve CAMSS16EX shelters can be stacked to a 463L pallet, and can be shipped without complication by truck, ship, or aircraft as each shelter weighs less than 500 pounds without a container.

NUMEROUS FEATURES

In addition to being light-weight, the aluminum frame resists corrosion and other environmental deterioration. Each shelter is equipped with a window in each end wall and open vents near the peak of the shelter. Double zippered doors, which can be easily rolled up, allow entry on both sides, including one 10' wide access point. The electrical system hosts a quick connect interface which incorporates four lights, two duplex outlets, and a distribution panel. The cover fabric is available in heavy duty commercial fabric as well as Mil-Spec, and the cover material is engineered to be resistant to mildew, fungus, and fire. In addition to the Extreme Weather Kit; flooring, lighting, outlets, and distribution panel are included.

COMPLETE INTEGRATION

All of our systems are fully integrable with a selection of add-on items including stove pipes, air conditioning and ECUs, an interlocking heavy duty hard floor, hard personnel doors, containers, power distribution systems, and generators to guarantee that the CAMSS16EX will be an idyllic fit for your application.
