CHOICE OF THE UNITED STATES MILITARY SERVICES

NAVY

HIGH QUALITY

There are numerous reasons government agencies and corporations depend on CAMSS for their shelter needs, and the CAMSS28EX38LP is a perfect example of why our systems are known for their quality and resilience. All materials in the CAMSS28EX38LP are specifically designed to be resistant to deterioration caused by various environmental conditions. For instance, the aluminum frame used in this system provides superior corrosion-resistance.

RUGGED & EFFICIENT

The CAMSS28EX38LP Shelter System is most popularly used by the Navy and measures 28' wide by 38' long, with a sidewall height of 11' and a 17.6' height at its peak. Each shelter includes a 12' wide by 8' high Steel Panel Roll-up Vehicular Door in each end wall, and two Aluminum Personnel Doors. The volume of accessibility supplied by these entrances combined with an impressive amount of interior space available makes this system a perfect fit for maintenance bays, repair shops, classrooms, storage facilities, and numerous other possibilities. Additionally, to best suit your purpose, the CAMSS28EX38LP is available with a range of options and add-ons; whether that means double zipper doors instead of the roll-up door or a complete electrical package with distribution panel, lights and outlets. The shelter is also available in an extended height model, the CAMSS28EX38NVY, which offers 14.5' sidewalls and a 20' peak height.

FIELD PROVEN

The CAMSS28EX38LP and CAMSS28EX38NVY are both rated for 70 mph winds with a 20 pound snow load. The optional High Wind Kit increases the wind load to 100 mph. In the field, CAMSS shelters successfully weather typhoons in the Middle East and endure hurricanes closer to home without sustaining damage.
