COMMAND & CONTROL

The CAMSS30CP Command Post Shelter is a compact and portable system developed in concert with the U.S. Army Natick Laboratories. The CAMSS30CP is a modified version of our California Medium Shelter System (CAMSS30) which is the official Medium Shelter System of the U.S. Air Force. Measuring 29.5' wide by 32.5' long and nearly 15' high, the CAMSS30CP provides a well-lit spacious interior perfectly suited for a center of operations, classroom, or briefing room. Equipped with eight double-zippered doors, this shelter features greater potential than other options for both ease of accessibility and to be the most ideal hub for complexing. Each door includes a connector boot, and is fully compatible to complex with any shelter or vestibule in the CAMSS line-up, and connects easily with TEMPER Tents and standard military shelters and vehicles.

FULLY EQUIPPED

The CAMSS30CP System includes a quick connect electrical kit with lights and outlets, our Extreme Weather Kit, flooring, eight screened windows with blackout covers, HVAC ports, a tan or green 44103D Mil-Spec cover, and electrical pass through ports. The Command Post Shelter can include numerous add-ons to best fit your requirements, whether that means an 11' wide by 10.5' high vehicle door or hard personnel doors.

TESTED & PROVEN

The CAMSS30CP is highly durable, incredibly resilient, and has been proven numerous times that this system can hold its own against destructive environmental conditions. The CAMSS30CP is engineered to withstand 100 mph winds and sustain a 20 pound snow load. Rigorous extreme weather testing confirms the CAMSS30CP operates in extreme temperatures from -55 to 125 degrees Fahrenheit. In further testing, no wear or damage was taken in repeated erection cycles.

Available for commercial as well as military users
