CAMSS18TAC35

Lighter. Faster. Better.

When it comes to the US Military, CAMSS Shelters understand speed is essential to any mission. That's why the CAMSS TAC Series of rapid deployment shelters are compact, lightweight, energy efficient, and fast to set up. The CAMSS TAC series shelters have one-piece frames and one-piece covers, which allow the shelters to erect in approximately three (3) to five (5) minutes. Tested extensively by the US Army and independent labs, the CAMSS TAC series shelters are built for demanding missions in harsh environments, meeting all the specifications set forth by the US Military for wind, rain, snow and erect/strike cycles. The CAMSS TAC Shelter Systems are more rugged lightweight and compact than any other shelters in their class.

The CAMSS TAC Series Shelter Systems have undergone blowing wind, driving rain, and snow load testing per TOP 10-2-175 standards and exceeds them all. For over three decades we have received client feedback on our shelters and how well our shelters have performed in the harshest, most demanding environments throughout the world.
