

CAMSS ARCHITECTURE

• TRIED AND TRUE •

CAMSS Shelters offers fabric buildings that provide an architectural appearance for applications such as public buildings and corporate space. Such projects includes functional airports with baggage handling, bus embarkment centers, offices, convention centers, public and private pool enclosures, aircraft enclosures, and hospitality suites.

These buildings are often customized versions of standard shelters and buildings. Customers may choose color and specialized fabrics that can extend life span to 20 to 30 years. Often customers choose our buildings for their project to attain a unique look and also have the ability to have a semi-permanent functional space at much less cost and time than conventional construction.

Below follows a number of successful projects some of which have been in place for over 20 years attesting to the satisfaction of our customers. Please contact us so we can learn more about your project requirements and goals.
