

CAMSS WEATHER PROTECTION

• **TRIED AND TRUE** •

Weather protection is important to assure the quality and efficiency of work and protect personnel and equipment from the intense effects of the sun and rain. Workers exposed to intense sun become fatigued more quickly and suffer health effects from prolonged unprotected exposure. Equipment too receives damage from sun and rain exposure resulting in reduced life expectancy and increased maintenance costs. CAMSS shade and rain shelters provide an environment to do the work more productively.

CAMSS Shelters provides shelters for such weather protection for varied uses to include gate inspection and security, aircraft shade shelters, packaging and materials handling, bus waiting transit location, construction and highway resurfacing, visitor waiting areas, vehicle maintenance and recreation. Below are some examples. Please contact us to discuss your project.

Gate Inspection and Security
